

# ALTERNATING currents corporation

*For all your electrical & generator needs since 1994*

## Our Installation Process

# THE ALTERNATING CURRENTS PROCESS OF ELECTRICAL INSTALLATION

At Alternating Currents, we have found through our years of experience that a systematic approach helps us to deliver the quality job promised to you. Below are the general steps we will take on your project. Your situation may vary depending upon your needs as outlined in your estimate.

See Web Site for Specials

## Step One: Estimate

Get started on your electrical project by receiving a free estimate. Our estimator can either come to your home or business and discuss additional details of your project during a time that's convenient for your schedule. Depending on the scope of the project, we may be able to provide an estimate via the telephone. You will receive a detailed estimate sent through the email generally within 24 hours.

## Step Two: Before Installation

Upon acceptance of the estimate provided, a DocuSign will be sent electronically for approval and to confirm scheduling. Depending on the project, a building permit may be required and will be included in the estimate. We request that all electronic devices and machines be unplugged during installation. All furniture and belongings in work area should be moved prior to our arrival.

## Step Three: Installation

We will arrive on time on the projected start date, protect all floors with drop cloths, and use booties for shoes. Our installers will place electrical boxes for location and request a signoff with our customer prior to proceeding with piping and wire. All work will be completed in a workmanlike manner according to standard practices and to national and local electrical code requirements. All material is guaranteed to be as specified in the estimate. We only use top-quality products and materials. Standard white receptacles, switches, and Ariadni slide toggle dimmer switches with white plastic cover plates will be installed, unless specific color and style are requested (additional cost may apply). Drywall/plaster may be damaged to complete a project. We will review and provide a signoff waiver prior to damage.

## Step Four: Clean Up

When we complete a project, we will vacuum and sweep floors and carpets. All of our materials are removed. We strive for white glove service. We encourage you to provide feedback of our services at: <http://altcur.com/customer-survey/>

## Step Five: Inspection

After our own inspection, we will invite you on a detailed walk-through of our work to meet your approval and request a job sign-off upon completion. Please contact us within 10 days after installation if a device is not operating correctly to rectify free of charge.

***Safety is our #1 priority, both for our customers and ourselves. Our company safety meetings instill our commitment to safe and quality installation. We follow local and national electrical codes and meet all inspection requirements. Furthermore, we are fully bonded and insured.***
